

## FACT SHEET

### Taking Business Continuity and Disaster Recovery to a Whole New Level

Never again does your company need to suffer through extended downtime or lost data because a critical server or workstation failed. When trouble strikes, you can have your critical server or workstation back up and running again in just minutes or easily recover any of their missing data using our reliable and affordable inSure BDR solutions.

This flexible solution provides the proven technology infrastructure necessary for companies like yours to benefit from world-class IP-based business continuity and disaster recovery solutions so your critical systems are always available. The inSure BDR maintains local and remote image backups which allow restoration of the entire image or just the file or email you need to restore. Restoring a failed server or workstation in minutes to a virtualized environment on the inSure BDR itself allows you the time needed to have your failed device repaired while your company doesn't miss a step.

We've combined award winning backup technology and services with the best bare-metal imaging and virtualization solutions in the business all on a flexible, high-quality hardware platform. The result is an easy and affordable way to make certain your business never suffers because of failed hardware.

Our inSure BDR solutions provide a wealth of features including:

#### Disaster Recovery

- **Local and Remote Bare Metal Image Support** – The BDR unit provides the best in Disaster Recovery by providing both a local and remote complete image of servers and/or workstations.

- **Supports Multiple Servers** - Each BDR can support backup of multiple servers and workstations.

- **Unique Storage Technology** – Utilizes unique silent data corruption prevention technology protection to proactively verify the integrity of all data stored in our data centers making sure your information is available at all times.

- **Secure** - Supports a fully private encryption key suitable for requirements established by HIPAA, FINRA, legal, etc.

- **Data Replication** - Supports replication of important data from one BDR to another BDR in a different location (Requires two BDR units).

### Transparent Business Continuity

- **Instant Virtualization** – Any server or workstation image stored on the BDR can be restored and virtualized on the BDR in minutes to provide the best transparent business continuity available anywhere.
- **What Down Time?** - No extended down time for your team while repairs are being made because your servers and workstations are protected by the BDR.
- **Hardware Health Monitoring** – Includes a complete monitoring and reporting solution to deliver status on temperature, performance, connectivity, disk space and much more to ensure that your BDR is ready for action. Includes notifications for out of range occurrences so you know ahead of time when trouble is brewing.

### Flexibility

- **Quality Hardware and Latest Software** - Modern Intel processor platform with advanced burn-in quality assurance and redundant storage.

- **Wide Range of Models** – A wide range of BDR models are available to meet the needs of any business and any budget.

- **Field Upgradeable** - Easily increase storage and memory for an in-service BDR. No need to purchase a new unit if your business needs grow more than anticipated.

- **Images, Files or Emails** - Instant access to entire images or easy access to individual files, mailboxes or specific messages.

### Keep It Simple

- **Initial Seed Speed** – Upload your initial image over the internet or send an encrypted USB preload - USB preloads are processed within 48 hours of receipt.

- **Cost Effective** - Provides a very cost effective solution for the ultimate protection for one of your most important and most volatile assets – your important data.

- **One Box to Rule Them All** – Our BDR supports local file and folder backups as well as complete image backups for laptops and other non-critical systems.

## ***You're in Control of Your Future***

When bad things happen, don't risk having your company working with paper and pencils instead of your critical technology systems. You need to have the best, most reliable solutions in place built from the best technology available. With inSure BDR you get the peace of mind that our professional team is constantly monitoring the backup of your critical data. Let Gilmore Solutions and inSure BDR become a valuable part of your business continuity planning!
